

ABSTRACT

The present invention comprises a gaming apparatus that includes a display device
5 comprising a display surface. The display surface comprises a plurality of indicia. A display
device actuator is in communication with the display surface and is configured to move the
display surface on a first predetermined path. A moveable indicator is included that is configured
to indicate at least one indicia appearing on the display surface. A moveable indicator actuator is
in communication with the moveable indicator and is configured to move the moveable indicator
10 along a second predetermined path. A controller is in communication with at least one of the
display device actuator and the moveable indicator actuator. The controller is configured to
position at least one of the display device and the movable indicator so that the movable indicator
indicates an indicia appearing on the display surface that conveys a game outcome.
